DETAILED ACTION

Allowable Subject Matter

1. Claims 6-12 and 14-20 allowed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2, 4 and 5 rejected under 35 U.S.C. 103(a) as being unpatentable over Wei et al. (6,852,582) in view of Unger (6,777,960) further in view of Pettit (2006/0054922)

Regarding Claims 1, 2, 4 and 5, Wei et al. disclose carbon nanotube gate field effect transistor where in Fig. 4, two carbon nanotube field effect transistors with gates 41 and 42 and shared source/drain regions 43 and 44 are disposed proximate to each other. Wei et al. Fail to disclose the required monitoring device and the required signal detection. However, Unger discloses method of interring existence of light by means of a measurement of the electrical characteristics of a nanotube bound with a dye and detection arrangement where in Figs. 2A-2D, and claims 1, 4 and 4, the required monitoring of the electrical characteristics of device 200 with monitoring device 202 is disclosed. Furthermore, Pettit discloses an optically controlled electrical switching device based on wide bandgap semiconductors where in Fig. 1, CNT FET 104 is spaced apart from transistors 108 and 109 and is adapted to measure signals from these to transistors.

Art Unit: 2826

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required monitoring of electrical characteristics and signal detection in Wei et al. as taught by Unger and Pettit, respectively, order to manufacture semiconductor devices with better reliability.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
